Factory refurbished parts from Baumer hhs

Unexpected repairs can disrupt production systems for an extended period of time. Baumer hhs's new programme gives you access to factory refurbished parts that meet the latest quality specifications. They get you back up and running in no time, so you can concentrate on your core business.

Maintaining your productivity

Your machines are as complex as your customer's demands. New challenges constantly have to be met within increasingly short time frames. Unplanned machine downtime reduces productivity and often leads to major scheduling problems. Baumer hhs has factory refurbished parts in stock to help you maintain your level of productivity without having to invest in your own inventory. You can ensure maximum machine availability and short production times.

The Baumer hhs factory refurbished parts programme

Factory refurbished parts are overhauled components that are of the same quality as new parts. In processing them, Baumer hhs places emphasis on achieving cost-efficiency and the same quality as the original product models. We use only OEM parts and we test and inspect all these products just like new parts, in order to guarantee optimum function. Factory refurbished parts are a good decision when time is of the essence, because they are generally kept in stock and can be shipped directly to customers.

Your cost advantages

Customers have clear advantages: With the Baumer hhs factory refurbished parts programme, you can reduce the cost of machine downtime and idle periods waiting for repairs to be completed – while benefiting from special fixed prices.

- Original Baumer hhs quality
- Same quality as original product model
- 12-month guarantee
- Factory refurbished products meet current quality specifications
- Reduced operating costs
- No wait time, refurbished parts are in stock

Products like new

At Baumer hhs, we respond to the needs of our customers. Our refurbished parts programme optimises the reliability of your operations and increases the availability of your production machines.

Whether you need a sensor, pump or application head, many products are available through the programme.
